

Dear Abha ,

Thank you for your letter I am really glad to meet you. In my family I have 2 sisters and a dog. My favorite subject is science and computers. I already made a website that I did when I was in 3rd grade. It only has games but my favorite game is called foes.io . The game is about being the last survivor. The only problem is that you have to run away from this red wall known as the "Death Wall ". I don't like chicago as much as I love Ecuador. In Ecuador you can see different things like The center of the world monument (like the one that I sended to larissa) and also the dogs that roam free without any owners.

I have a few questions that I have that are... 1. What is silica ? 2. What is your favorite food ? 3. Who is your favorite soccer player ? 4. Do you have any brothers or sisters? And 5. Do you have any pets? I also never knew that your particles were 1000X smaller than a strand of hair! I have never see silica before on a microscope and I don't even know what does silica look like that is why I was asking about what is silica before. I also didn't know that you love to cook. I love to help my mom cook but I never cook on my own just in case there is a accident.

I would also like to know more about your job as a scientist like what else do you like about the nanoparticles. I like your job as a scientist and maybe in the future I might even be a scientist. I am wondering about PhD because I want to know how many years is does it take ? Is it just 4 years or more? I will really hope to hear from you soon :)

Sincerely , Daniel
